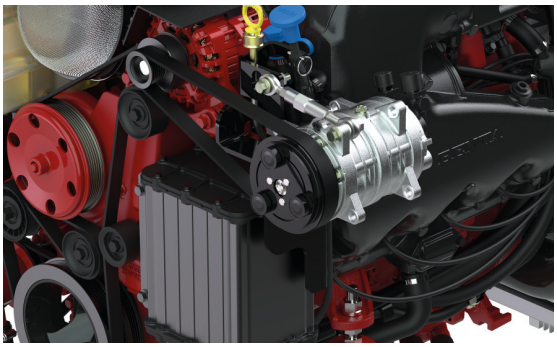
Engine Powered Cooling & Heating System



Breeze by Webasto

Specifically designed for the marine industry, the Breeze provides ambient cooling & heating for many scenarios on-demand with a simple on/off button and three fan speeds. The consumer can easily select the option to install the Breeze during the boat building process. Thanks to its small overall footprint and 12VDC power supply no additional generators or expensive installation add-ons are needed. For workboats, Breeze is a perfect heating and cooling system as the boat engine is running anyhow. The integration of the Breeze allows enthusiasts to extend their time on the water, providing a blast of cold air during the stifling summer heat and warming their passengers after a dip in the water when the temperatures start to decline later in the season.

Product Features:

- Extends season
- Provides valuable comfort benefits to the boat builder & owner
- Engine mounted & belt driven compressor
- 12V DC System – Does NOT require a generator
- Operates as long as boat engine is running
- Compact design
- Cost effective
- Easy to use Simple on/off button and three fan speeds
